Earth Lab: Exploring the Earth Sciences - Claudia Owen 2010-06-21

Utilizing graphs and simple calculations, this clearly written lab manual complements the study of earth science or physical geology. Engaging activities are designed to help students develop data-gathering skills (e.g., mineral and rock identification) and data-analysis skills. Students will learn how to understand aerial and satellite images; to perceive the importance of stratigraphic columns, geologic sections, and seismic waves; and more. Conceptual Profiles - Eduardo F. Mortimer 2014-02-07

The language of science has many words and phrases whose meaning either changes in differing contexts or alters to reflect developments in a given discipline. This book presents the authors' theories on using 'conceptual profiles' to make the teaching of context-dependent meanings more effective. Developed over two decades, their theory begins with a recognition of the coexistence in the students' discourse of those alternative meanings, even in the case of scientific concepts such as molecule, where the dissonance between the classical and modern views of the same phenomenon is an accepted norm. What began as an alternative model of conceptual change has evolved to incorporate a sociocultural approach, by drawing on ideas such as situated cognition and Vygotsky's influential concept of culturally located learning. Also informed by pragmatist philosophy, the approach has grown into a well-rounded theory of teaching and learning scientific concepts. The authors have taken the opportunity in this book to develop their ideas further, anticipate and respond to criticisms—that of relativism, for example—and explain how their theory can be applied to analyze the teaching of core concepts in science such as heat and temperature, life and biological adaptation. They also report on the implementation of a research program that correlates the responsiveness of their methodology to all the main developments in the field of science education. This additional material will inform academic discussion, review, and further enhancement of their theory and research model.

Signs of the Giver - Southwestern College 2003

This volume contains collection of ten essays that focus on the fiction and non-fiction of southern novelist Walker Percy (1916-1990). Delivered during the 2002 Walker Percy Undergraduate Seminar held at Southwestern College in Winfield, KS, the contributors focus upon a wide array of topics relevant to the study of Percy's writings. Catholicism, race relations, existentialism and even Percy's semiotics receive attention in this dynamic collection.

Complex Biological Systems - Irina R. Fomina 2018-10-16

Global climate change is one of the most serious and pressing issues facing our planet. Rather than a "silver bullet" or a single study that solves it, the study of global climate change is like a beach, with each contribution a grain of sand, gathered together as a whole to create a big picture, moving the science forward. This new groundbreaking study focuses on the adaptation and tolerance of plants and animal life to the harsh conditions brought on by climate change or global warming. Using the papers collected here, scientists can better understand global climate change, its causes, results, and, ultimately, the future of life on our planet. The first section lays out a methodology and conceptual direction of the work as a whole, covering the modeling, approaches, and the impacts studied throughout the book. The second section focuses on certain hypotheses laid out by the authors regarding how plants and animal life can adapt and survive in extreme environments. The third section compiles a series of ecological experiments and their conclusions, and a final section is dedicated to previous scientific breakthroughs in this field and the scientists who made them. Whether for the scientist in the field, the student, or as a reference, this groundbreaking new work is a must-have. Focusing on a small part of the global climate change "beach," this "grain of sand" is an extremely important contribution to the scientific literature and a step forward in understanding the problems and potentialities of the issue.

Planet Earth Is Blue - Nicole Panteleakos 2020-05-05

"Tender and illuminating. A beautiful debut." --Rebecca Stead, Newbery Medal-winning author of *When You Reach Me* A heartrending and hopeful story about a nonverbal girl and her passion for space exploration, for fans of *See You in the Cosmos*, *Mockingbird*, and *The Thing About Jellyfish*. Twelve-year-old Nova is eagerly awaiting the launch of the space shuttle Challenger—it's the first time a teacher is going into space, and kids across America will watch the event on live TV in their classrooms. Nova and her big sister, Bridget, share a love of astronomy and the space program. They planned to watch the launch together. But Bridget has disappeared, and Nova is in a new foster home. While foster families and teachers dismiss Nova as severely autistic and nonverbal, Bridget understands how intelligent and special Nova is, and all that she can't express. As the liftoff draws closer, Nova's new foster family and teachers begin to see her potential, and for the first time, she is making friends without Bridget. But every day, she's counting down to the launch, and to the moment when she'll see Bridget again. Because as Bridget said, "No matter what, I'll be there. I promise."

Geology From Experience - E. Kirsten Peters 2001

Moving away from the observation-and-vocabulary focus of traditional physical geology lab manuals, Peters and Davis's *Geology from Experience* offers experiments that favor hands-on involvement and scientific problem-solving. Students are asked to use geological tools and techniques; analyze data from observation, experiment and research; solve simple equations; and make assessments and relevant predictions. This approach, class-tested with great success by the authors, gives students a real taste of the scientific experience by revealing the ways geologists actually do their work.

Strangers in a Strange Lab - William Ickes 2009-08-27

Winner of the 2012 International Association for Relationship Research Book Award Can we predict how well -- or how poorly -- two strangers will get along? According to social psychologist William Ickes, the answer is yes. Drawing upon relevant research findings from his 30-year career, Ickes explains how initial interactions are shaped by gender, race, birth order, physical attractiveness, androgyny, the Big Five dimensions, shyness, and self-monitoring. Ickes's work offers unprecedented insights on the links between personality and social behavior that have not previously been compiled in a single source: how sibling relationships during childhood affect our interactions with opposite-sex strangers years later; why Latinos have a social advantage in initial interactions; how men

react to the physical attractiveness of a female stranger in a relatively direct and obvious way while women react to the attractiveness of a male stranger in a more indirect and subtle way; and how personality similarity is related to satisfaction in married couples.

The Handy Answer Book for Kids (and Parents) - Gina Misiroglu 2009-10-01

Kids ask the darndest things . . . and here are the answers—all in one helpful book! Anyone who has ever been a kid, raised a kid, or spent any time with kids knows that asking questions is a critical part of growing up.
