THE FIDIC FORMS OF CONTRACT - NAEL G. BUNNI 2013-02-05

In September 1999, FIDIC introduced its new suite of contracts, which included a “new” Red, Yellow, Silver and Green forms of contract. The “new” Red Book was intended to replace the 1992 fourth edition of the Red Book, with the ambition that its use would cease with time. This ambition has not materialised and is unlikely to do so in the future. Despite the importance of the 1999 forms, there has been very little published on the new concepts adopted in them and how they interact with the previous forms. This important work considers these aspects together with the many developments affecting the fourth edition of the Red Book that have taken place since 1997, when the second edition of this book was published, and relates them to key contracting issues. It is written by a chartered engineer, conciliator and international arbitrator with wide experience in the use of the FIDIC forms and in the various dispute resolution mechanisms specified in them. Important features of this book include: • background and concepts of the various forms of contract; • a detailed comparison of the wording of the 1999 three main forms, which although similar in nature; it nevertheless significantly differs in certain areas where the three forms diverge due to their intended purpose; • analysis of the rights and obligations of the parties involved in the contract and the allocation of risks concerned; • a range of ‘decision tree’ charts, analysing the main features of the 1992 Red Book, including risks, indemnities and insurances, claims and counterclaims, variations, procedure for claims, programme and delay, suspension, payments and certificates, dispute resolution mechanisms, and dispute boards; • a much enlarged discussion of the meaning of “claim” and “dispute” and the types of claim with a discussion of the notice provision in the 1999 forms of contract for the submission of claims by a contractor and by an employer; • the FIDIC scheme of indemnities and insurance requirements; and the methods of dispute resolution provided by the various forms of contract; and • five new chapters in this third edition, the first four chapters deal with each of the 1999 forms and the fifth chapter is confined to the topic of Dispute Boards.

FIDIC – A GUIDE FOR PRACTITIONERS - Axel-Volkmar Jaeger 2009-11-11

In 1999, a suite of three new conditions of contract was published by FIDIC, following the basic structure and wording harmonised and updated around the previous FIDIC Design-Build and Turnkey Contract (the 1992 “Orange Book”). These conditions, known as the “FIDIC rainbow”, were the conditions of contract for: 1. Construction, the so-called Red Book, for works designed by the employer; 2. Plant and Design-Build, the so-called Yellow Book, for works designed by the contractor; 3. EPC/Turnkey projects, the so-called Silver Book, for works designed by the contractor. The first is intended for construction works where the employer is responsible for the design, as for per the previous so-called Red Book 4th Edition (1987), with an important role for the engineer. The other two conditions of contract are intended for situations when the contractor is responsible for the design. The Plant and Design-Build contract has the traditional engineer while the EPC/Turnkey contract has a two-party arrangement, generally with an employer’s representative as one of the parties.

THE ICE CONDITIONS OF CONTRACT - Brian Eggleston 2008-04-15

The ICE conditions continues to be the dominant form of contract for civil engineering, despite the growing importance of the New Engineering Contract. The seventh edition of the ICE conditions, published in 1999, introduced a number of changes, including: incorporating some of the concepts of the Latham Report amending certain provisions of the sixth edition which had attracted criticism rectifying conspicuous omissions from the text of earlier editions of the contract correcting small errors and faults from the previous edition modernising certain provisions and terms Brian Eggleston, whose previous book on the ICE conditions was described as ‘likely to become the authoritative reference source for the sixth edition’, examines the contract clause by clause from a practical and legal viewpoint. There is extensive coverage of case law. Written by an experienced civil engineer and recognized authority on construction contracts, this book is an essential guide.

THE THEORY OF INCENTIVES - Jean-Jacques Laffont 2009-12-27

Economics has much to do with incentives—not least, incentives to work hard, to produce quality products, to study, to invest, and to save. Although Adam Smith amply confirmed this more than two hundred years ago in his analysis of sharecropping contracts, only in recent decades has a theory begun to emerge to place the topic at the heart of economic thinking. In this book, Jean-Jacques Laffont and David Martimort present the most thorough yet accessible introduction to incentives theory to date. Central to this theory is a simple question as pivotal to modern-day management as it is to economics research: What makes people act in a particular way in an economic or business situation? In seeking an answer, the authors provide the methodological tools to design institutions that can ensure good incentives for economic agents. This book focuses on the principal-agent model, the “simple” situation where a principal, or company, delegates a task to a single agent through a contract—the essence of management and contract theory. How does the owner or manager of a firm align the objectives of its various members to maximize profits? Following a brief historical overview showing how the problem of incentives has come to the fore in the past two centuries, the authors devote the bulk of their work to exploring principal-agent models and various extensions thereof in light of three types of information problems: adverse selection, moral hazard, and non-verifiability. Offering an unprecedented look at a subject vital to industrial organization, labor economics, and behavioral economics, this book is set to become the definitive resource for students, researchers, and others who might find themselves pondering what contracts, and the incentives they embody, are really all about.
