Victory Deferred - John-Manuel Andriote
1999-06

John-Manuel Andriote chronicles the impact of the disease from the coming-out revelry of the 1970s to the post-AIDS gay community of the 1990s, showing how it has changed both individual lives and national organizations. He tells the truly remarkable story of how a health crisis pushed a disjointed jumble of local activists to become a nationally visible and politically powerful civil rights movement, a full-fledged minority group challenging the authority of some of the nations most powerful institutions. Based on hundreds of interviews with those at the forefront of the medical, political, and cultural responses to the disease. Victory Deferred blends

personal narratives with institutional histories and organizational politics to show how AIDS forced gay men from their closets and ghettos into the hallways of power to lobby and into the streets to protest.

Preventing HIV through safe voluntary medical male circumcision for adolescent boys and men in generalized HIV epidemics - World Health

Organization 2020-08-31

Since 2007 the World Health Organization (WHO) and the Joint United Nations Programme on HIV/AIDS (UNAIDS) have recommended voluntary medical male circumcision (VMMC) as an important strategy for the prevention of heterosexually acquired HIV in men in settings where the prevalence of heterosexually transmitted HIV is high. Over 25 million men and adolescent boys in East and Southern Africa have been reached with VMMC services. These new

guidelines update earlier WHO recommendations to maximize the HIV prevention impact of safe VMMC services and aim to guide the transition to the sustained provision of interventions with a focus on the health and well-being of both adolescent boys and men.

Ancestors and Antiretrovirals - Claire Laurier Decoteau 2013-09-30

In the years since the end of apartheid, South Africans have enjoyed a progressive constitution, considerable access to social services for the poor and sick, and a booming economy that has made their nation into one of the wealthiest on the continent. At the same time, South Africa experiences extremely unequal income distribution, and its citizens suffer the highest prevalence of HIV in the world. As Archbishop Desmond Tutu has noted, "AIDS is South Africa's new apartheid." In *Ancestors and Antiretrovirals*, Claire

Laurier Decoteau backs up Tutu's assertion with powerful arguments about how this came to pass. Decoteau traces the historical shifts in health policy after apartheid and describes their effects, detailing, in particular, the changing relationship between biomedical and indigenous health care, both at the national and the local level. Decoteau tells this story from the perspective of those living with and dying from AIDS in Johannesburg's squatter camps. At the same time, she exposes the complex and often contradictory ways that the South African government has failed to balance the demands of neoliberal capital with the considerable health needs of its population.

HIV/AIDS Treatment and Care - Irina Eramova 2007

The WHO Regional Office for Europe has combined its 13 protocols on treatment of and care for people with HIV and AIDS in

one volume. The protocols are the cornerstone of the strategic actions that WHO has taken as part of its contribution to achieving the goal of universal access to HIV/AIDS prevention, treatment, care and support services. The protocols were specifically developed for the entire WHO European Region. Together, they represent a comprehensive and evidence-based tool that offers health professionals clear and specific advice on diagnosing and managing a wide range of health issues related to HIV/AIDS for adults, adolescents and children, including antiretroviral treatment, the management of opportunistic infections, tuberculosis, hepatitis, injecting drug use, sexual and reproductive health, the prevention of mother-to-child HIV transmission, immunization, palliative care and post-exposure prophylaxis. [Ed.]

HIV/AIDS Treatment in Resource Poor Countries - Yichen Lu 2014-11-09

The book focuses on HIV/AIDS prevention and treatment strategies in resource-poor settings. Contributors include HIV/AIDS researchers and public health administrators from the US, Africa, China, and Thailand. Several chapters, written by local health officials, take a close look at AIDS prevention and treatment in China at the community level. Other chapters cover issues of treatment scale-up, drug resistance, and mother-to-child transmission in Southern Africa and Thailand, and offer lessons learned for researchers in other developing countries. Overall the aim of this book is to bring some of the latest issues to the fore, and to foster exchange and collaboration between AIDS researchers in developing countries. This book grew out of an annual conference held in China and organized by the Harvard School of Public Health, and could possibly become the first volume of a series.

The River - Edward Hooper 2000

A British medical journalist offers a meticulously researched look at HIV and its potential source, discussing the history of this lethal epidemic, analyzing a number of theories concerning its origins, and investigating current scientific inquiries into HIV, AIDS, and the search for a cure. Reprint. 15,000 first printing.

Handbook on Access to HIV/AIDS-related Treatment - Carolyn Green 2003

This handbook is intended to assist nongovernmental organizations, community-based organizations, and groups of people living with HIV/AIDS in finding ways of understanding, planning, and undertaking work on HIV/AIDS-related treatment. It builds on practical skills by using participatory activities and sharing experiences; provides a training resource for NGO support programs, training organizations and individuals; and

facilitates ongoing learning about the treatment work being carried out by the various groups involved. Applicable at all levels of experience, the handbook offers flexibility to facilitators who need to gear their work towards specific schedules or situations.

Disease Control Priorities, Third Edition (Volume 6) - King K. Holmes 2017-11-06

Infectious diseases are the leading cause of death globally, particularly among children and young adults. The spread of new pathogens and the threat of antimicrobial resistance pose particular challenges in combating these diseases. Major Infectious Diseases identifies feasible, cost-effective packages of interventions and strategies across delivery platforms to prevent and treat HIV/AIDS, other sexually transmitted infections, tuberculosis, malaria, adult febrile illness, viral hepatitis, and neglected tropical diseases. The volume emphasizes the need to effectively address emerging antimicrobial resistance, strengthen health

systems, and increase access to care. The attainable goals are to reduce incidence, develop innovative approaches, and optimize existing tools in resource-constrained settings.

The Social Impact of AIDS in the United States - National Research Council 1993-02-01

Europe's "Black Death" contributed to the rise of nation states, mercantile economies, and even the Reformation. Will the AIDS epidemic have similar dramatic effects on the social and political landscape of the twenty-first century? This readable volume looks at the impact of AIDS since its emergence and suggests its effects in the next decade, when a million or more Americans will likely die of the disease. The Social Impact of AIDS in the United States addresses some of the most sensitive and controversial issues in the public debate over AIDS. This landmark book explores

how AIDS has affected fundamental policies and practices in our major institutions, examining: How America's major religious organizations have dealt with sometimes conflicting values: the imperative of care for the sick versus traditional views of homosexuality and drug use. Hotly debated public health measures, such as HIV antibody testing and screening, tracing of sexual contacts, and quarantine. The potential risk of HIV infection to and from health care workers. How AIDS activists have brought about major change in the way new drugs are brought to the marketplace. The impact of AIDS on community-based organizations, from volunteers caring for individuals to the highly political ACT-UP organization. Coping with HIV infection in prisons. Two case studies shed light on HIV and the family relationship. One reports on some efforts to gain legal recognition for

nonmarital relationships, and the other examines foster care programs for newborns with the HIV virus. A case study of New York City details how selected institutions interact to give what may be a picture of AIDS in the future. This clear and comprehensive presentation will be of interest to anyone concerned about AIDS and its impact on the country: health professionals, sociologists, psychologists, advocates for at-risk populations, and interested individuals.

Essential Human Virology - Jennifer Louten
2016-03-29

Essential Human Virology is written for the undergraduate level with case studies integrated into each chapter. The structure and classification of viruses will be covered, as well as virus transmission and virus replication strategies based upon type of viral nucleic acid. Several chapters will focus on notable and recognizable viruses and the diseases caused by them, including influenza, HIV, hepatitis viruses, poliovirus, herpesviruses, and emerging and dangerous viruses. Additionally, how viruses cause disease, or pathogenesis, will be highlighted during the discussion of each virus family, and a chapter on the

immune response to viruses will be included. Further, research laboratory assays and viral diagnosis assays will be discussed, as will vaccines, anti-viral drugs, gene therapy, and the beneficial uses of viruses. By focusing on general virology principles, current and future technologies, familiar human viruses, and the effects of these viruses on humans, this textbook will provide a solid foundation in virology while keeping the interest of undergraduate students. Focuses on the human diseases and cellular pathology that viruses cause Highlights current and cutting-edge technology and associated issues Presents real case studies and current news highlights in each chapter Features dynamic illustrations, chapter assessment questions, key terms, and summary of concepts, as well as an instructor website with lecture slides, test bank, and recommended activities

HIV Infection is the continuing standard for practice and education in the field of HIV. *To Make the Wounded Whole* - Dan Royles 2020-07-21

In the decades since it was identified in 1981, HIV/AIDS has devastated African American communities. Members of those communities mobilized to fight the epidemic and its consequences from the beginning of the AIDS activist movement. They struggled not only to overcome the stigma and denial surrounding a "white gay disease" in Black America, but also to bring resources to struggling communities that were often dismissed as too "hard to reach." *To Make the Wounded Whole* offers the first history of African American AIDS activism in all of its depth and breadth. Dan Royles introduces a diverse constellation of activists, including medical professionals, Black gay intellectuals, church pastors, Nation of Islam leaders, recovering drug

users, and Black feminists who pursued a wide array of grassroots approaches to slow the epidemic's spread and address its impacts. Through interlinked stories from Philadelphia and Atlanta to South Africa and back again, Royles documents the diverse, creative, and global work of African American activists in the decades-long battle against HIV/AIDS.

Global AIDS Monitoring 2019 - United Nations Publications 2019-04-17

The purpose of this document is to provide guidance to national AIDS programmes and partners on the use of indicators to measure and report on the country response. The 2016 United Nations Political Declaration on Ending AIDS, adopted at the United Nations General Assembly High-Level Meeting on AIDS in June 2016, mandated UNAIDS to support countries in reporting on the commitments in the Political Declaration. The Political

Declaration on Ending AIDS built on three previous political declarations: the 2001 Declaration of Commitment on HIV/AIDS, the 2006 Political Declaration on HIV/AIDS and the 2011 Political Declaration on HIV and AIDS.

Patient Zero and the Making of the AIDS Epidemic - Richard A. McKay
2017-11-22

The search for a “patient zero”—popularly understood to be the first person infected in an epidemic—has been key to media coverage of major infectious disease outbreaks for more than three decades. Yet the term itself did not exist before the emergence of the HIV/AIDS epidemic in the 1980s. How did this idea so swiftly come to exert such a strong grip on the scientific, media, and popular consciousness? In

Patient Zero, Richard A. McKay interprets a wealth of archival sources and interviews to demonstrate how this seemingly new concept drew upon centuries-old ideas—and fears—about contagion and social disorder. McKay presents a carefully documented and sensitively written account of the life of Gaétan Dugas, a gay man whose skin cancer diagnosis in 1980 took on very different meanings as the HIV/AIDS epidemic developed—and who received widespread posthumous infamy when he was incorrectly identified as patient zero of the North American outbreak. McKay shows how investigators from the US Centers for Disease Control inadvertently created the term amid their early research into the emerging health crisis; how an ambitious journalist dramatically amplified the idea in his determination to reframe national debates about AIDS; and how many individuals grappled with the notion

of patient zero—adopting, challenging and redirecting its powerful meanings—as they tried to make sense of and respond to the first fifteen years of an unfolding epidemic. With important insights for our interconnected age, Patient Zero untangles the complex process by which individuals and groups create meaning and allocate blame when faced with new disease threats. What McKay gives us here is myth-smashing revisionist history at its best.

AIDS in Africa - Joint United Nations Programme on HIV/AIDS. 2005

This report presents three hypothetical case studies for how the AIDS epidemic in Africa could evolve over the next 20 years based on policy decisions taken today by African leaders and the rest of the world; and considers the factors likely to drive the future responses of African countries and the international community. The scenarios draw on the age-old tradition of storytelling, rather than using data projections, to explore the wider context of the AIDS epidemic, reflecting the complexity of the subject matter.

Essential Case Studies in Public Health - Katherine Hunting 2011-07-22

students and others new to the field of public health or global health. It is based on and designed for a one-semester global health course.

Measuring What Matters - Institute of Medicine 2004-06-09

The Ryan White Comprehensive AIDS Resources Emergency (CARE) Act gives funding to cities, states, and other public and private entities to provide care and support services to individuals with HIV and AIDS who have low-incomes and little or no insurance. The CARE Act is a discretionary program that relies on annual appropriations from Congress to provide care for low-income, uninsured, or underinsured individuals who have no other resources to pay for care. Despite its successes, funding has been insufficient to address all of the inequalities and gaps in coverage for people with HIV. In response to a congressional mandate, an Institute of

Medicine committee was formed to reevaluate whether CARE allocation strategies are an equitable and efficient way of distributing resources to jurisdictions with the greatest needs and to assess whether quality of care can be refined and expanded. Measuring What

Matters: Allocation, Planning, and Quality Assessment for the Ryan White CARE Act proposes several types of analyses that could be used to guide the evaluation and improvement of allocation formulas, as well as a framework for assessing quality of care provided to HIV-infected persons.
