Sports Development -

Peter Bramham 2006-09-07
First Published in 2001.
Routledge is an imprint
of Taylor & Francis, an
informa company.

Human Capital - Gary S.
Becker 1994

Human Capital is
Becker's classic study
of how investment in an
individual's education
and training is similar
to business investments
in equipment. Recipient
of the 1992 Nobel Prize
in Economic Science,
Gary S. Becker is a
pioneer of applying
economic an.

**Curriculum Development
and Design** - Murray
Print 2020-08-07

This book has been
written to provide a
current, practical,
Australian-based
approach to designing
and developing
curriculum. The demands
of schools and
educational systems
today are such that
teachers with practical
curriculum skills are

highly valued and this
book provides a vital
source for teachers who
wish to build their
skills in the field of
curriculum design and
development. The book
addresses the needs of
curriculum developers by
examining the nature of
the curriculum process
and how it can be
applied in schools. A
particular strength is
the way in which the
chapters are structured
around a model of
curriculum development.
As the model unfolds the
reader is familiarised
with the various
elements of curriculum
including situational
analysis, intent,
content, learning
activities and
evaluation. Teachers
will appreciate the
value of understanding
these elements and in so
doing will acquire
valuable skills of
curriculum design and
development. A feature

of this book is that it addresses the issues of curriculum implementation and curriculum change. To devise a curriculum document in these times is tough enough. Those who wish to see their curricula succeed must be involved with implementing that curriculum and the curriculum change that results. This important new book is particularly appropriate to classroom teachers, system developers and student teachers studying curriculum.

Beyond Knowledge Management - Bob Garvey 2002

Organizational learning, allied with information management and intellectual capital, are crucial elements in the success of any business. This text moves beyond knowledge management into the realms of corporate

dialogue, creativity and corporate culture.

The New Knowledge Management - Mark W. McElroy 2010-02-17

'The New Knowledge Management' is the story of the birth of "second-generation knowledge management," told from the perspective of one its chief architects, Mark W. McElroy. Unlike its first-generation cousin, second-generation Knowledge Management seeks to enhance knowledge production, not just knowledge sharing. As a result, 'The New Knowledge Management' expands the overall reach of knowledge management to include "innovation management" for the very first time. 'The New Knowledge Management' introduces the concept of "second-generation knowledge management" to the business community. Mark W. McElroy has assembled

a collection of his own essays, written over the past four years, chronicling the development of related thinking in the field. Unlike first-generation KM, mainly focusing on value derived from knowledge sharing, second-generation thinking formally adds knowledge making to the scope of KM. In this way second-generation KM expands the overall reach of KM to include "innovation management" for the very first time. 'The New Knowledge Management' finally begins to bridge the gap between KM and the field of organizational learning, which up until now have been viewed as miles apart.

Self-Publishing and Collection Development -

Robert P. Holley
2015-09-15

The current publishing environment has experienced a drastic

change in the way content is created, delivered, and acquired, particularly for libraries. With the increasing importance of digital publishing, more than half the titles published in the United States are self-published. With this growth in self-published materials, librarians, publishers, and vendors have been forced to rethink channels of production, distribution, and access as it applies to the new content. Self-Publishing and Collection Development:

Opportunities and Challenges for Libraries will address multiple aspects of how public and academic libraries can deal with the increase in self-published titles. While both academic and public libraries have started to grapple with the burgeoning issues

associated with self-published books, many difficulties remain. To develop effective policies and procedures, stakeholders must now tackle questions associated with the transformation of the publishing landscape. Obstacles to self-publishing include the lack of reviews, the absence of cataloging and bibliographic control, proprietary formats for e-books, and the difficulty for vendors in providing these works. General chapters will include information on reviewing sources, cataloging and bibliographic control, and vendor issues. Information addressing public libraries issues will highlight initiatives to make self-published materials available at the Los Gatos Public Library in California and the Kent District Library in

Michigan. Chapters on academic library issues will address why self-published materials are important for academic institutions, especially those with comprehensive collecting interests. Several self-published authors focus on how they attempt to make their works more suitable for public libraries. Finally, the book concludes with a bibliographic essay on self-publishing. As the term "traditional publishing" begins to fade and new content producers join the conversation, librarians, publishers, and vendors will play an important role in facilitating and managing the shift.

Knowledge Management -
Suliman Al-Hawamdeh
2003-10-31
This book serves as a reference for individuals interested in knowledge management

(KM) and educational issues surrounding KM. It looks at KM as an emerging profession and the need to educate a new generation of knowledge professionals to deal with managing knowledge on the one hand and managing knowledge workers on the other hand. In particular, it examines the skills and competencies of knowledge professionals;

and how educational programs can address these demands – covering such issues as determining the optimal mix of subjects from the various disciplines that develop the requisite professional competencies. The first book to cover KM education Adopts a multidisciplinary approach to KM education Based on the many years of experience of the author in KM education
