Symptom to Diagnosis An Evidence Based Guide, Fourth Edition - Scott D. C. Stern 2019-11-29

Publisher's Note: Products purchased from Third Party sellers are not guaranteed by the publisher for quality, authenticity, or access to any online entitlements included with the product. "This book is a tremendous asset for students and residents learning to develop their diagnostic skills. It can also be useful as a refresher for established clinicians when the more common diagnoses are not the cause of a patient's complaints." —Doody's Review An engaging case-based approach to learning the diagnostic process in internal medicine Symptom to Diagnosis, Fourth Edition teaches an evidence-based, step-by-step process for evaluating, diagnosing, and treating patients based on their clinical complaints. By applying this process clinicians will be able to recognize specific diseases and prescribe the most effective therapy. Each chapter is built around a common patient complaint that illustrates essential concepts and provides insight into the process by which the differential diagnosis is identified. As the case progresses, clinical reasoning is explained in detail. The differential diagnosis for that particular case is summarized in tables that highlight the clinical clues and important tests for the leading diagnostic hypothesis and alternative diagnostic hypotheses. As the chapter progresses, the pertinent diseases are reviewed. Just as in real life, the case unfolds in a stepwise fashion as tests are performed and diagnoses are confirmed or refuted. Completely updated to reflect the latest research in clinical medicine, this fourth edition is enhanced by algorithms, summary

tables, questions that direct evaluation, and an examination of recently developed diagnostic tools and guidelines. Clinical pearls are featured in every chapter. Coverage for each disease includes: Textbook Presentation, Disease Highlights, Evidence-Based Diagnosis, and Treatment.

Pharmacy Management, Leadership, Marketing, and Finance - Marie A. Chisholm-Burns 2014

Risk and Blame - Professor Mary Douglas 2013-06-17

First published in 1992, this volume follows on from the programme for studying risk and blame that was implied in Purity and Danger. The first half of the book Douglas argues that the study of risk needs a systematic framework of political and cultural comparison. In the latter half she examines questions in cultural theory. Through the eleven essays contained in Risk and Blame, Douglas argues that the prominence of risk discourse will force upon the social sciences a programme of rethinking and consolidation that will include anthropological approaches.

The People's Health - Xun Zhou 2020-08-20

In 1949, the Communist Party of China pledged that its approach to health care would differ markedly from that of the former Nationalist government and the "imperialist" West. For the next thirty years, under Mao's leadership, the People's Republic of China made improving the health of the entire population a central pillar of its policy. International health stakeholders came to view it as a statistical outlier in its ability to achieve better health outcomes with limited resources. The People's Health is the first systematic study of health care and medicine in Maoist China. Drawing on hundreds of files from rarely seen party archives and oral testimonies from experts, local cadres, and villagers across China, Zhou Xun shifts her historian's gaze away from official statistics towards the records of local institutions and personal memories that reflect and give voice to lived experiences. Through the everyday interactions of policy makers, national and local administration, and communities, Zhou illustrates the dynamic relationship between politics and health, and between individual lives and the political system. Presenting case

studies of internationally acclaimed public health initiatives in the PRC - the anti-schistosomiasis campaign and the Barefoot Doctor program - this book offers the first thorough, politically neutral analysis of their background, execution, and national and international repercussions. Opening a unique window into the lives - and health care - of individuals living under communism, *The People's Health* examines the links between local interest, cultural sensibilities, resources, and abilities, exploring the often unforeseeable consequences of political planning and social engineering.

Written by two leading scholars and replete with paintings, photographs and images drawn from dime novels, posters, comics, theatrical productions, movies, polemical and pseudo-scholarly literature, and other pop culture ephemera, this book is both a unique and fascinating archive and a modern analysis of this crucial historical formation.

The Pharmacist's Guide to Evidence-Based Medicine for Clinical Decision

Making - Patrick J. Bryant 2008-08-31

While most practicing pharmacists are familiar with the term and the general concept of evidence-based medicine, few are adequately trained in the clinical application of these skills. Developed to give clinical pharmacists an edge, this book provides a practical approach for applying sound EBM principles to your clinical decision making process. Decision making based on personal experience alone, without knowledge from well-designed, controlled, randomized trials with adequate sample size, often overestimates the efficacy and underestimates the safety risks associated with drugs. This book provides a roadmap that is instructional and, most importantly, practical for the pharmacist so these new skills can be applied immediately in practice. Based on a five-step process perfected over ten years at the University of Missouri, Kansas City, School of Pharmacy, this exciting new approach will:

- Reduce complexity
- Shorten time for decision making support
- Maintain rigor
- Categorize quality of the evidence in a simple, straightforward, and logical manner
- Provide a process designed specifically for pharmacists making drug therapy decisions

Use of examples, tables, diagrams, and key points highlighted throughout the book and summarized at the end of each chapter provide the pharmacist with skills they can implement the next day to begin applying EBM principles to their practice.

The Jew in the Modern World - Paul R. Mendes-Flohr 1995

The last two centuries have witnessed a radical transformation of Jewish life. Marked by such profound events as the Holocaust and the establishment of the state of Israel, Judaism's long journey through the modern age has been a complex and tumultuous one, leading many Jews to ask themselves not only where they have been and where they are going, but what it means to be a Jew in today's world. Tracing the Jewish experience in the modern period and illustrating the transformation of Jewish religion, culture, and identity from the 17th century to 1948, the updated edition of this critically acclaimed volume of primary materials remains the most complete sourcebook on modern Jewish history. Now expanded to supplement the most vital documents of the first edition, *The Jew in the Modern World* features hitherto unpublished and inaccessible sources concerning the Jewish experience in Eastern Europe, women in Jewish history, American Jewish life, the Holocaust, and Zionism and the nascent Jewish community in Palestine on the eve of the establishment of the State of Israel. The documents are arranged chronologically in each of eleven chapters and are meticulously and extensively annotated and cross-referenced in order to provide the

Fear and Loathing in the North - Cordelia Heß 2015-04-24

Due to the scarcity of sources regarding actual Jewish and Muslim communities and settlements, there has until now been little work on either the perception of or encounters with Muslims and Jews in medieval Scandinavia and the Baltic Region. The volume provides the reader with the possibility to appreciate and understand the complexity of Jewish-Christian-Muslim relations in the medieval North. The contributions cover topics such as cultural and economic exchange between Christians and members of other religions; evidence of actual Jews and Muslims in the Baltic Rim; images and

stereotypes of the Other. The volume thus presents a previously neglected field of research that will help nuance the overall picture of interreligious relations in medieval Europe.
